Discussion,Conclusion,and References.Do not generatescientific content.

I'll replace the placeholder document with a clean, compile-ready research-paper skeleton containing only structural placeholders.

The skeleton is in place. I'm doing a quick compile check to catch any LaTeX/package issues.

Created a clean scientific research paper skeleton in `main.tex` with all requested sections, placeholders, and bibliography support. It compiles successfully.

claim

I'll treat the populated title, abstract, and keywords in `main.tex` as the supplied text and clean only their LaTeX formatting, preserving every word, claim, value, and displayed citation.

The text is now normalized as LaTeX source without changing its rendered wording. I'm checking that the document still compiles cleanly.

Converted the title, abstract, and keywords into clean LaTeX while preserving all wording, terminology, claims, and citations. The document compiles successfully.

Convert this section into properly structured LaTeX.Preserveparagraph order, citations, terminology, equations,and all technical details.Do not summarize and do not introduce new content

I'll structure the newly added Introduction and Related Work directly in `main.tex`, converting headings, quotations, the five questions, arrows, percentages, and equations into valid LaTeX while preserving the prose and its order.

The section structure is complete. I'm compiling now to verify the escaped percentages, quotations, list, subsection numbering, and displayed equations.

Structured the Introduction and Related Work with:

The document compiles successfully.

Convert this section into properly structured LaTeX.Preserveparagraph order, citations, terminology, equations,and all technical details.Do not summarize and do not introduce new content

I'll format the "Current Approaches and Developments" section into numbered subsections, displayed equations, structured tuples, and quotation blocks while preserving its paragraph order and technical content.

The section is structured and the duplicated plain-text/math renderings have been consolidated into single LaTeX equations. I'm running a compile check now.

Formatted "Current Approaches and Developments" with proper subsections, quotation blocks, tuples, and displayed equations. All technical content and citations are preserved, and the document compiles successfully.

Convert the following text into clean LaTeX.Preserve the exact wording, terminology, scientific meaning, numerical values,and citations. Do not add,remove,or reinterpret any scientific claim

Running a command

Converted the technical discussion into clean LaTeX with structured subsections, equations, lists, a table, and examples. The document compiles successfully.

please tell me where refrences has been added

Compiling reference details

I need to check the file positions to find line numbers. The user's request likely pertains to references, possibly a bibliography or cross-references. Based on their prior question about where references have been added, I'll need to create a concise list with line numbers. Since the current file's line numbers could change, it makes sense to use a tool for this. I'll start with a commentary to provide context.

Running a command

Clarifying bibliography details

I need to be concise here. It seems the user wants to clarify that both the bibliography entries are in references.bib and also wants to know if citations are added there. I'll include both cross-references and bibliography entries, making sure the exact line links are clickable and provide absolute

references. It looks like the user might be asking about linking main.tex line numbers too, so I'll keep it minimal while ensuring clarity.
Cross-references were added in `main.tex`:

Labels are placed near each referenced object. Bibliographic entries are stored in `references.bib`.

Discussion,Conclusion,and References.Do not generatescientific content.
I'll replace the placeholder document with a clean, compile-ready research-paper skeleton containing only structural placeholders.
The skeleton is in place. I'm doing a quick compile check to catch any LaTeX/package issues.
